词典 计数排序 邓俊辉 deng@tsinghua.edu.cn The purpose of computing is insight, not numbers.

算法 (1)

- ❖ 回忆: 基数排序中反复做的桶排序...
- ❖ 亦属"小集合 + 大数据"类型,是否可以更快?

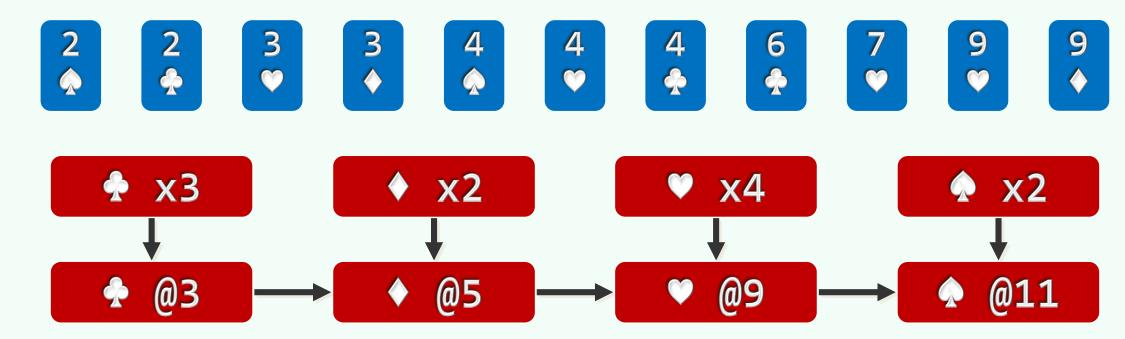

- 你以纸牌排序为例 ($n \gg m = 4$) ,假设已按点数排序,以下对花色排序
- 1) 经过分桶,统计出各种花色的数量 //Ø(n)

算法 (2+3)

2) 自前向后扫描各桶, 依次累加 //cumulative sum, Ø(m)

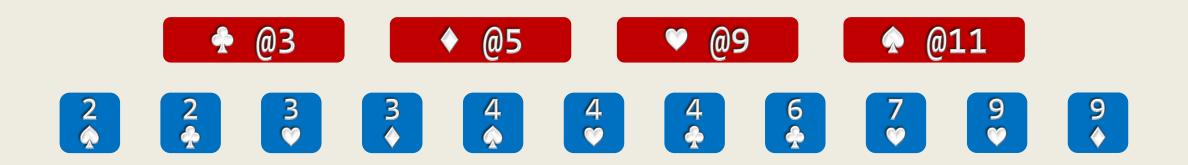

即可确定各套花色所处的秩区间: [0,3) + [3,5) + [5,9) + [9,11)

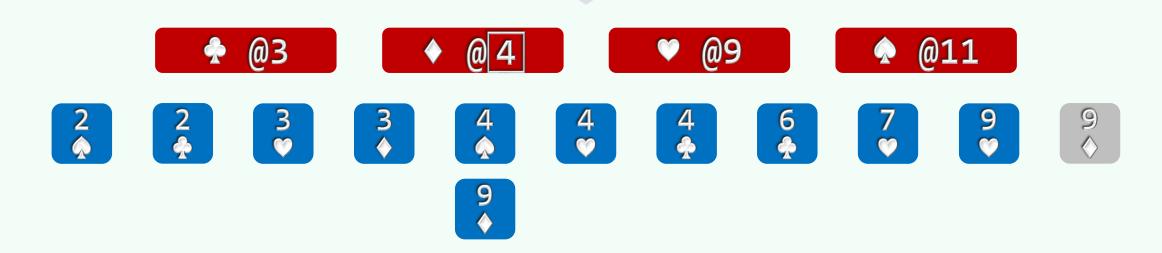

3) **自后向前扫描每一**张牌 //ø(n)

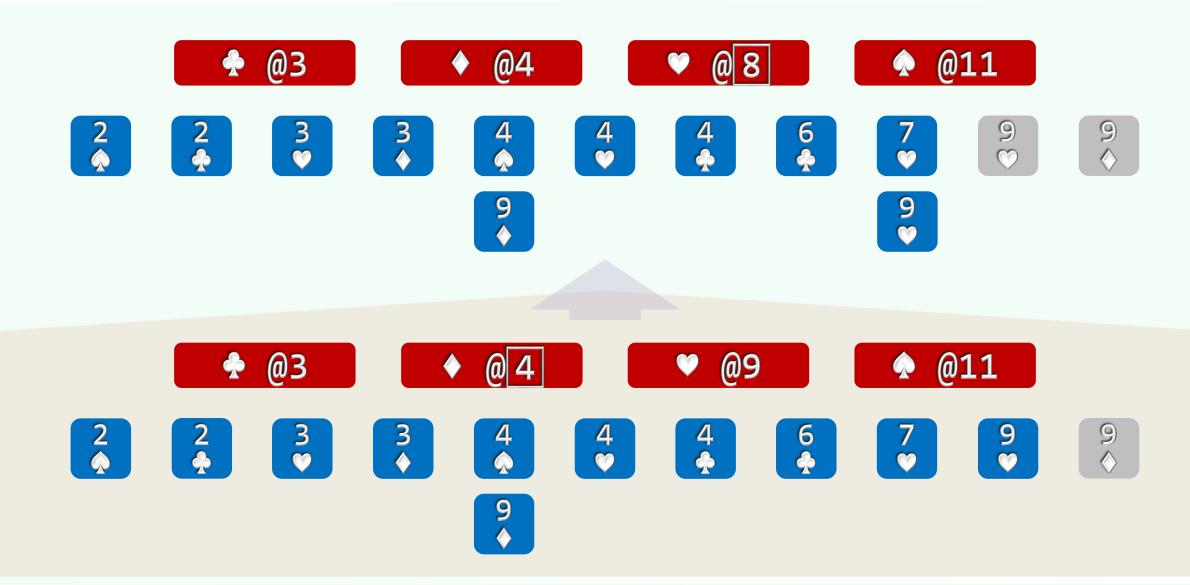

对应桶的计数减一,即是其在最终有序序列中对应的秩

实例 (1/11)

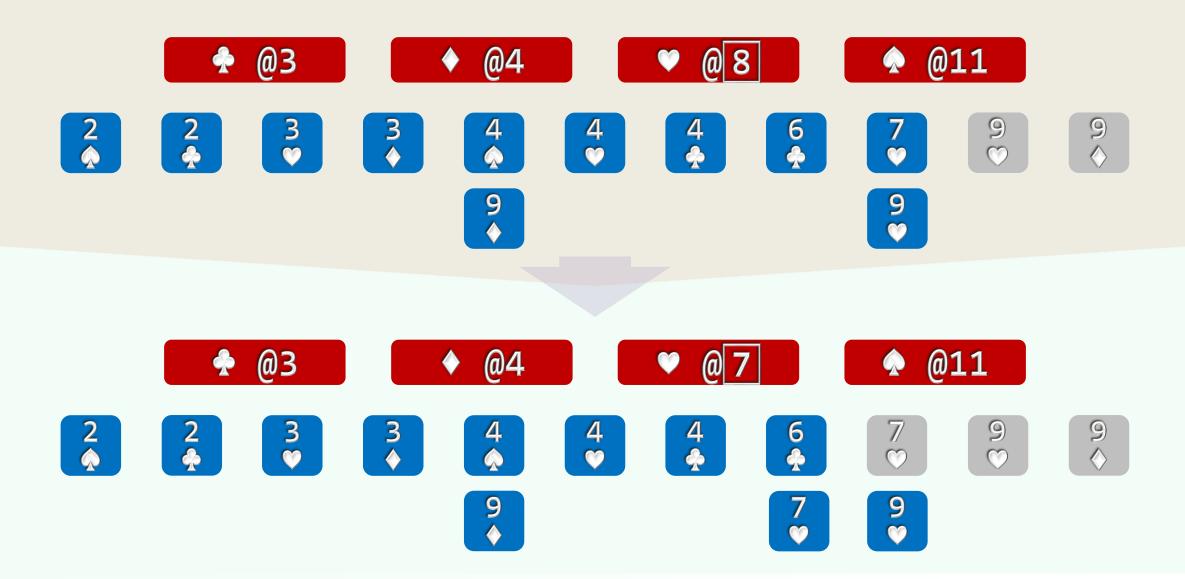

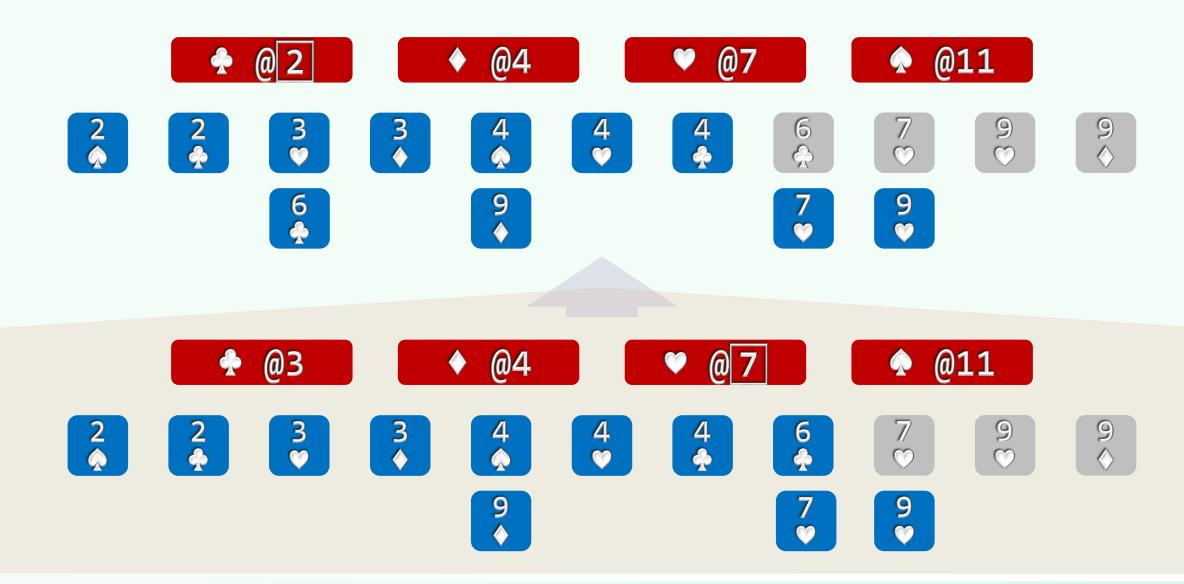

实例 (2/11)

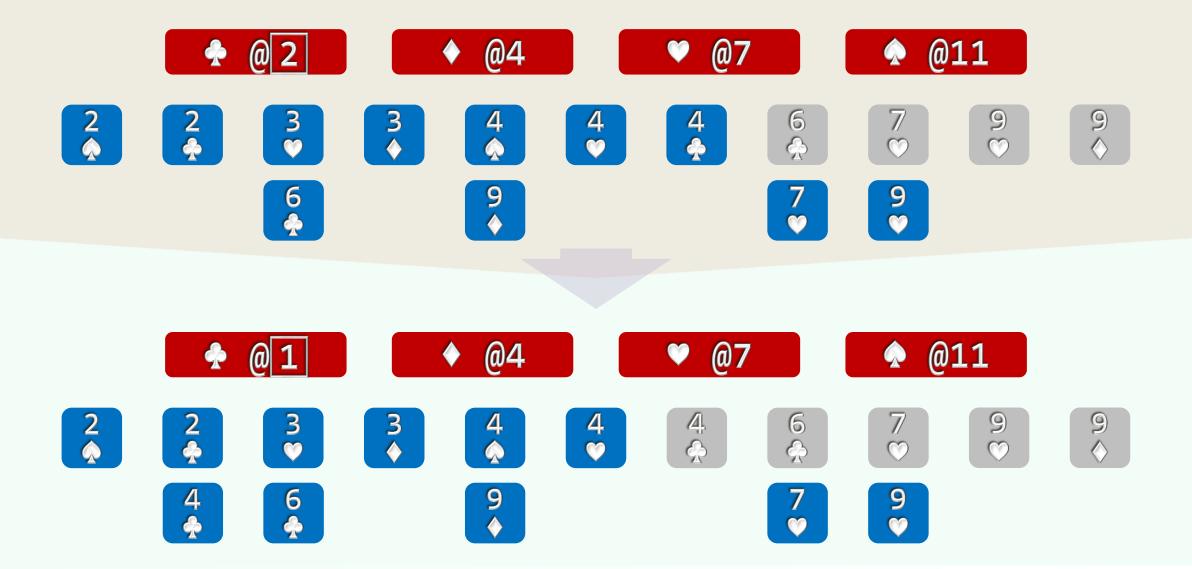

实例 (3/11)

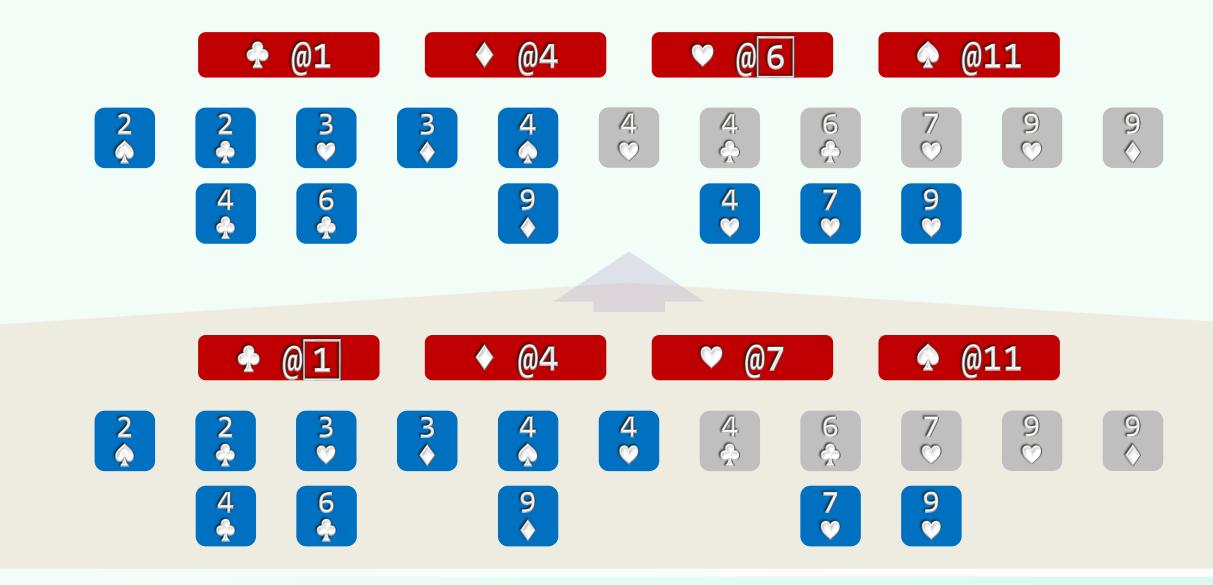

实例 (4/11)

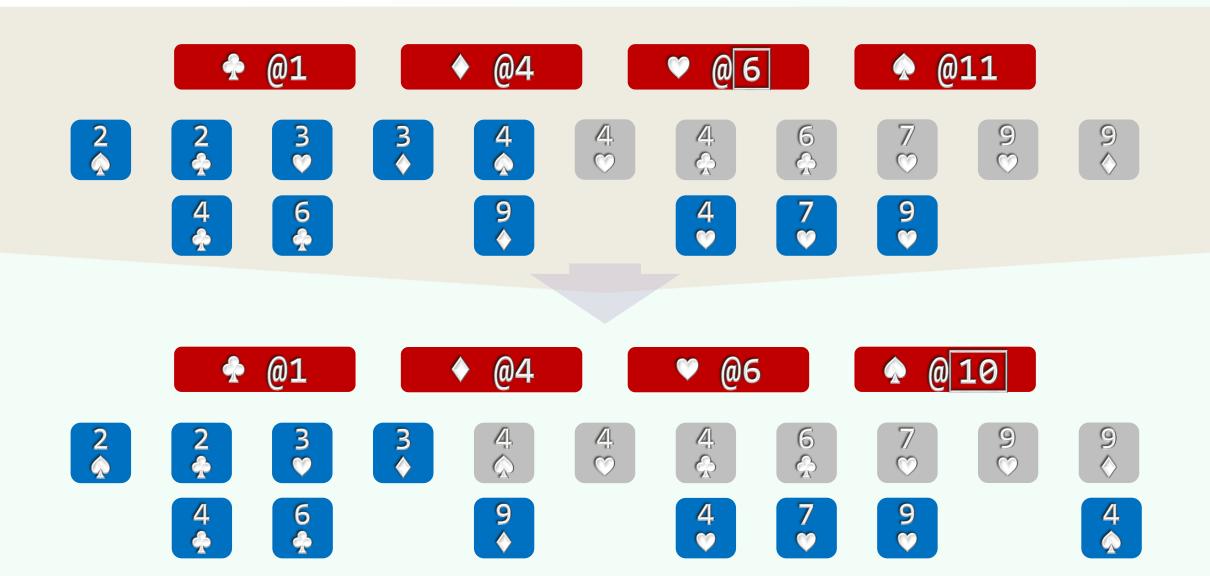

实例 (5/11)

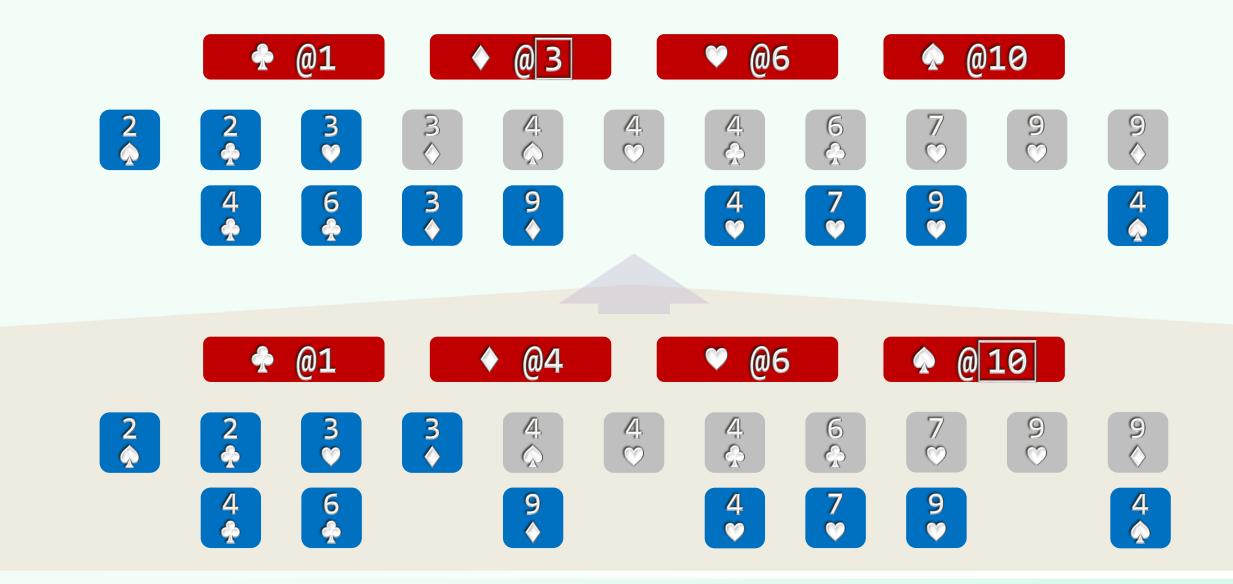

实例 (6/11)

实例 (11/11)

分析

- ❖ 时间复杂度 $= \mathcal{O}(n+m+n) = \mathcal{O}(n)$ ——高效处理大规模数据

❖ 空间复杂度 $= \mathcal{O}(n)$

-不能就地完成,需借助外存

❖ 最后一步的扫描次序,可否改为自前向后?
